

“Working at Heights” Training Deadline Extended

Patrick Ganley and Jeffrey Stewart

April 3, 2017

Brief Background

Ontario’s Working at Heights training requirements came into force on April 1, 2015, requiring every employer to ensure any worker on a construction project successfully complete a Working at Heights training program approved by the Chief Prevention Officer (CPO) and delivered by a CPO-approved training provider, before the worker can work at heights.

There was a two-year transition period for a worker who, prior to April 1, 2015, had met the fall protection training requirements then in force¹ under the *Occupational Health and Safety Act*. Those workers had until April 1, 2017 to complete an approved Working at Heights training program.

The deadline for a worker to complete Working at Heights training has now been extended from April 1, 2017 to October 1, 2017.² This training is valid for three years.

Who Qualifies for the Extension?

The extension to October 1, 2017 does not apply to every construction worker who requires Working at Heights training, but only to a worker who:

- Prior to April 1, 2015, completed training that complied with then existing legislation; and
- Is enrolled in an approved Working at Heights training program scheduled to be completed before October 1, 2017.

In respect of the latter, an employer must have written confirmation of the worker’s enrollment in the training program, available to a Ministry of Labour inspector, if requested. No specific documentation is required so long as confirmation includes the:

- worker’s name
- name of the approved training provider
- name of the training program
- scheduled date of training completion

¹ Ontario Regulation 213/91, section 26.2(1)

² Ontario Regulation 84/17

Working at Heights Training

Working at Heights training applies to all construction projects in Ontario and includes:

- rights and responsibilities related to working at heights
- hazard identification
- ladder safety
- proper usage of personal protective equipment

Every construction employer is required to ensure every worker using one of the following methods of fall protection completes approved training:

- travel restraint system
- fall restricting system
- fall arrest system
- safety net
- work belt
- safety belt

What Happens If Training is Not Completed on Time?

A construction employer has a duty to ensure a worker on its site has the required training. Employing the services of a worker without this training risks injury, a compliance order, fine, or stop work order (if the risk is serious and a hazard is imminent).

Finding an Approved Trainer

The Ministry of Labour has set out a list of approved training providers at:
https://www.labour.gov.on.ca/english/hs/wah_providers.php.
